

Day 9
Karnish N

Task 1:

Using python flask, create view page

- In the view, retrieve the list of the users from SQL(sqlite3)
- Display in the html table

CODING:

[App.py](#)

```
from flask import Flask, render_template, url_for, request, redirect
import sqlite3

app = Flask(__name__)

@app.route('/')
def index():
    return "Hello"

@app.route('/My_html/<nam>')
def ret_html(nam):
    return render_template('Mypage.html', Name=nam)

@app.route('/success/<name>')
def success(name):
    return f'Welcome {name}'

@app.route('/login', methods=['POST', 'GET'])
def login():
    if request.method == 'POST':
        user = request.form['nam']
        password = request.form['pwd']
        email = request.form['email']

        if password == 'payoda':
            with sqlite3.connect("UserDB.db") as con:
                cur = con.cursor()
                cur.execute("INSERT INTO Login (username, email, password) VALUES (?, ?, ?)",
                            (user, email, password))
                con.commit()
            return redirect(url_for('list_users'))
        else:
```

```

        return "Unauthorized", 401

    return render_template('login.html')

@app.route('/users')
def list_users():
    with sqlite3.connect("UserDB.db") as con:
        cur = con.cursor()
        cur.execute("SELECT username, email, password FROM Login")
        users = cur.fetchall() # List of tuples
    return render_template('user_list.html', users=users)

@app.route('/delete_all')
def delete_all_users():
    with sqlite3.connect("UserDB.db") as con:
        cur = con.cursor()
        cur.execute("DELETE FROM Login") # deletes all rows
        con.commit()
    return redirect(url_for('list_users'))

@app.route('/result')
def result():
    marks = {'phy': 50, 'che': 40, 'cse': 80}
    return render_template('my-result.html', result=marks)

if __name__ == '__main__':
    app.run(debug=True)

```

user_list.html:

```

<!DOCTYPE html>
<html>
<head>
    <title>User List</title>
    <style>
        body { font-family: Arial, sans-serif; }
        table { border-collapse: collapse; width: 60%; margin: 20px
auto; }
        th, td { border: 1px solid #ddd; padding: 8px; text-align:
center; }
        th { background-color: #f2f2f2; }
        a.btn { padding: 8px 12px; background-color: red; color: white;
text-decoration: none; border-radius: 4px; }

```

```

        a.btn:hover { background-color: darkred; }
        .top-btn { display: block; margin: 20px auto; width: 200px;
text-align: center; }
    </style>
</head>
<body>
    <h2 style="text-align:center;">User List</h2>

    <a href="{{ url_for('delete_all_users') }}"
        onclick="return confirm('Are you sure you want to delete ALL
users?') "
        class="btn top-btn">Delete All Users</a>

    <table>
        <tr>
            <th>Username</th>
            <th>Email</th>
            <th>Password</th>
        </tr>
        {% for u in users %}
        <tr>
            <td>{{ u[0] }}</td>
            <td>{{ u[1] }}</td>
            <td>{{ u[2] }}</td>
        </tr>
        {% endfor %}
    </table>
</body>
</html>

```

Login.html:

```

<!DOCTYPE html>
