

## Day12

### Karnish N

(20/08/2025)

### Task 1

1. To the existing books table, add additional column called price and add at least ten entries with some price values.
  - 1.1 Create a post request 'GetBooksOrderedByPrice()' with a boolean parameter
    - 1.1.1 when parameter is true, then sort by price ascending order
    - 1.1.2 when parameter is false, then sort by price descending order
  - 1.2 Create a get request 'GetTop5Books()' which will return top 5 costliest books
  - 1.3 Create a get request 'GetCostDetails()' which will return the total price and average price of all books.

### OUTPUT:

The screenshot displays the Swagger UI for 'Day12api' (version 1.0, OAS 3.0) at the URL <http://localhost:5211/swagger/v1/swagger.json>. The 'Book' section lists several endpoints:

- GET /api/Book/GetAllBooks
- POST /api/Book/AddBook
- DELETE /api/Book/DeleteBook/{id}
- POST /api/Book/GetBooksOrderedByPrice (selected)
- GET /api/Book/GetTop5Books
- GET /api/Book/GetCostDetails

The selected endpoint, POST /api/Book/GetBooksOrderedByPrice, is shown in detail below. It features a 'Parameters' section with a single query parameter:

| Name      | Description     |
|-----------|-----------------|
| ascending | boolean (query) |

The 'ascending' parameter is currently set to 'true'. Below the parameters, there are 'Execute' and 'Clear' buttons. The 'Responses' section is currently empty. At the bottom, the 'Curl' section shows the generated curl command:

```
curl -X 'POST' \
  'http://localhost:5211/api/Book/GetBooksOrderedByPrice?ascending=false' \
  -H 'accept: */*' \
  -d ''
```

The 'Request URL' is <http://localhost:5211/api/Book/GetBooksOrderedByPrice?ascending=false>. The 'Server response' section is also empty.
